DETAILED ACTION

Allowable Subject Matter

Claims 1, 3-7, and 9-23 are allowed, and renumbered 1-21 respectively.

The following is an examiner's statement of reasons for allowance: As per claims 1, 3-7, and 9-23: the claims are directed to the establishing registration of a new subscriber to a central system through a first router selected from a list of subscribers that responded to search signal of new subscriber. Central system decides whether or not to accept registration of new subscriber through routers. After been successfully registered to central system mobile subscriber sends a second search signal and reports back to central system information about subscribers that respond to the second signal that are in the vicinity of the new subscriber.

The recited prior art deals with a distributed wireless call processing system that includes multiple transceivers and able to form a plurality of routes within the network formed by the units as recited in the prior art of Lynch. Prior art of Larson deals with a method of transmitting data between station in a wireless communication system having multiple mobile devices and base stations. Base stations have an effective coverage zone that communicates with other base station located outside the effective coverage zone through mobile device.

The station monitors data transmission and adjust transmission power accordingly when relaying data. The combination of Larson will not remedy the deficiency of Lynch as far as establishing a second search signal and reports

back to central system information about subscribers that respond to the second signal that are in the vicinity of the new subscriber.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance"
